Marking Advice

Generally, high value items such as bumpers are very popular items for the thief, because they are the first things to suffer damage, so the demand on the black market is high. This applies to light clusters as well, mark inside rather than front surfaces, apply around the area where the bulbs are changed. Alloy wheels should be marked, but again, don't spoil the appearance, mark the inner edges, inside the rims. Don't forget the spare wheel.

Clean all areas to be marked. *This guide to locations is useful, but by no means definitive*, please use your imagination, and don't apply the Dots to surfaces which you can see, and might spoil the appearance of your car.

Typically, you can mark up to about 40 locations with one pack.

Shake the pot vigorously before use. You will see the tiny dots like dark particles in the creamy glue, shake until they are well spread. The glue dries clear.

Practise first on a piece of white paper. The glue is water based, so you can wipe off any surplus with a damp cloth, but once dried, the mark is permanent.

Apply warning labels to driver and passenger windows (the labels are not easily removed, so make sure you're happy with the position(s) that you choose)

More on marking locations:

Door rubbers are another good marking place, bend the rubber back and apply to inner edges. Don't apply the Dots to external paintwork or inside, to surfaces which you can see and might spoil the appearance of the car, paint on undersides, edges, under flaps or lids; avoid electrical connections or moving parts, such as hinges. Even the tool kit can be dotted up if you have any left over!

Don't forget to register by going to www.alphadot.it
Registration is FREE.

Please keep us updated if you move house, or
change your contact details.
