Marking Advice

Thousands of cycles are recovered by police, so many are never returned simply because they cannot be identified. The fitting guide is not definitive, use your imagination, starting with cleaner areas first, such as under saddle and handlebars, under rubbers, then the frame.

Clean all areas to be marked. *This guide to locations is useful, but by no means definitive*, please use your imagination, and don't apply the Dots to surfaces which you can see, and might spoil the appearance of your bike.

Typically, you can mark up to about 40 locations with one pack.

Shake the pot vigorously before use. You will see the tiny dots like dark particles in the creamy glue, shake until they are well spread. The glue dries clear.

Practise first on a piece of white paper. The glue is water based, so you can wipe off any surplus with a damp cloth, but once dried, the mark is permanent.

Apply warning labels in highly visible areas (the labels are not easily removed, so make sure you're happy with the position(s) that you choose)

More on marking locations:

You can also use your Alpha•Dot pack to mark accessories including lights, panniers, drinks bottle and it's even safe to use on your cycle helmet.

Don't forget to register by going to www.alphadot.it
Registration is FREE.

Please keep us updated if you move house, or
change your contact details.
