## Marking your Outboard Engine(s)

## Marking Advice

Work from the exterior outwards, finally the engine compartment, as the glue will become dirty.

Clean all areas to be marked. *The guide to locations is useful, but by no means definitive.*

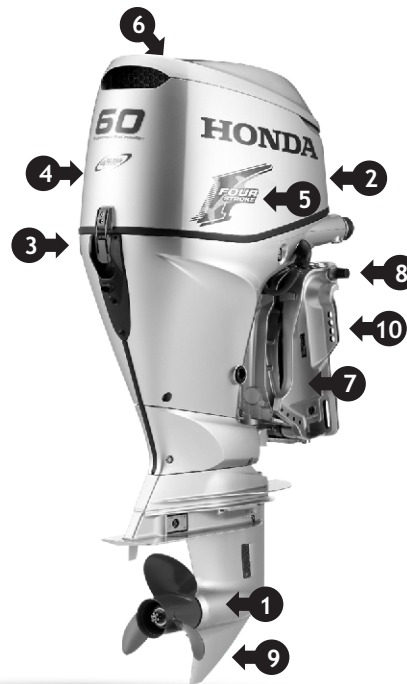

Please use your imagination, and don't apply the Dots to surfaces which you can see, and might spoil the appearance of your engine.

Typically, you can mark up to about 40 locations with one pack.

Shake the pot vigorously before use. You will see the tiny dots like dark particles in the creamy glue, shake until they are well spread. The glue dries clear.

Practise first on a piece of white paper. The glue is water based, so you can wipe off any surplus with a damp cloth, but once dried, the mark is permanent.

Apply warning labels in highly visible areas (the labels are not easily removed, so make sure you're happy with the position(s) that you choose)

- |                        |                         |
|------------------------|-------------------------|
| 1. Propshaft / Housing | 6. Fuel filler area/cap |
| 2. Battery casing      | 7. Rating plate         |
| 3. Cowling / Covers    | 8. Steering gear/tiller |
| 4. Engine              | 9. Skeg (rear)          |
| 5. Gearbox             | 10. Mountings           |

Mark as many places as you can think of  
making sure they are as well hidden  
as possible.
